DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I (claims 1-6 and 29-30) in the reply filed on 8/28/07 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Specification

2. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 and 29-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Wajima (US 6373169).

Wajima discloses a piezoelectric sheet (2); internal electrodes (2c) formed on the upper and lower sides of the piezoelectric sheet; cover layers (3 and 4), formed on each side of the upper and lower portions of said piezoelectric sheet including the internal electrodes; external electrodes (7), each of which is connected to the corresponding internal electrodes; and wherein

Art Unit: 2834

said cover layer is provided with a vibration groove, said vibration grooves disposed on a portion of the respective internal electrodes.

Regarding claim 2, Wajima discloses the vibration grooves being disposed in the cover layers, as shown in the main figure.

Regarding claim 3, the vibration grooves as disposed between the piezoelectric layer and the cover layer.

Regarding claim 4, Wajima also discloses a third external electrode (8) formed in the middle of the surface of the cover layer.

Regarding claim 5, Wajima discloses the dielectric sheets (3 and 4).

Regarding claim 6, Wajima anticipates the invention as explained above, providing three external electrodes.

Regarding claims 29-30, in figure 15, Wajima discloses a through hole electrode (41) connected to the third external electrode (42)

The limitation “wherein the piezoelectric sheet is fabricated by forming a sheet of slurry, and the vibrator is fabricated by simultaneously sintering the piezoelectric sheet and the cover layers” has been given little patentable weight. The applicant is advised that patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process.” *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
